#### Objective:

The Intermediate Bond Portfolio seeks to provide a consistent return above the benchmark & to dampen risk within a client's total investment program. The portfolio seeks to outperform the weighted average total rate of return for a customized benchmark comprised of 85% Bloomberg Intermediate Government / Credit "A or Better" Index and 15% of the Bloomberg Securitized Index.

#### Investment Strategy:

Seix Investment Advisors believes that institutional investors benefit by maintaining allocations to actively managed fixed income securities in all market environments. Our proprietary, fundamental (of both a top down and bottom up nature) investment process emphasizes income, quality, diversification and liquidity in order to serve as the anchor of a diversified portfolio while still exploiting inefficiencies in multiple sectors of the global fixed income marketplace.

#### Performance Analysis:

The portfolio's total return for Q4 was -1.86% (-1.90% net) vs. the benchmark return of -1.85%.

ABS asset allocation (overweight) was the primary contributor to relative performance in Q4 while the security selection did not materially impact relative performance.

Yield curve positioning was the primary detractor from relative performance.

The corporate sector asset allocation was a secondary detractor from relative performance, but it was mostly offset via security selection gains.

RMBS, CMBS, and government related did not materially impact relative performance in Q4.

Indices are unmanaged, may not include the reinvestment of dividends and do not reflect transaction costs or management fees and other expenses. Unlike these indices, the portfolios are actively managed and may include substantially fewer securities than the number of securities comprising these indices. Investors cannot purchase interests directly in an index.
